

Data sheet

# Differential pressure and flow controller (PN 16, 25, 40)

**AFPQ / VFQ 2(1)** - return mounting, adjustable setting

**AFPQ 4 / VFQ 2(1)** - flow mounting, adjustable setting

Description

The controller has a control valve with adjustable flow restrictor, an actuator with two control diaphragms and spring for differential pressure setting. Differential pressure control and flow control are independent.

Further on two valve versions are available:

- VFQ 2 with metallic sealing cone
- VFQ 21 with soft sealing cone (on special request)

**Main data:**

- DN 15-250
- $k_{vs}$  4,0-400 m<sup>3</sup>/h
- Flow range: 0,1-250 m<sup>3</sup>/h
- PN 16, 25, 40
- Setting range: 0,1-0,7 bar / 0,15-1,5 bar
- Flow restrictor  $\Delta p_b$ : 0,2 bar or 0,5 bar
- Temperature:
  - Circulation water / glycolic water up to 30 %: 2 ... 150/200 °C
- Connections:
  - Flange

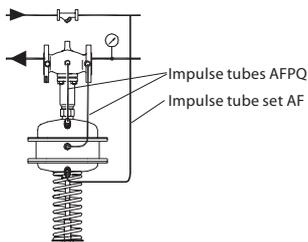

The controller is a self-acting differential pressure and flow controller primarily for use in district heating systems. The controller closes on rising differential pressure or when set max. flow is exceeded.

Ordering

*Example 1:*  
Differential pressure and flow controller; return mounting; DN 15;  $k_{vs}$  4,0; PN 16; metallic sealing; setting range 0,1-0,7 bar; flow restrictor  $\Delta p_b$  0,2 bar;  $T_{max}$  150 °C; flange;

- 1x VFQ 2 DN 15 valve  
Code no: **065B2654**
- 1x AFPQ actuator  
Code no: **003G1029**
- 1x AFPQ DN 15 impulse tubes  
Code no: **003G1365**
- 1x Impulse tube set AF  
Code no: **003G1391**

Products will be delivered separately.

**VFQ 2 Valves (metallic sealing cone)**

Application principles

– Return mounting

– Flow mounting

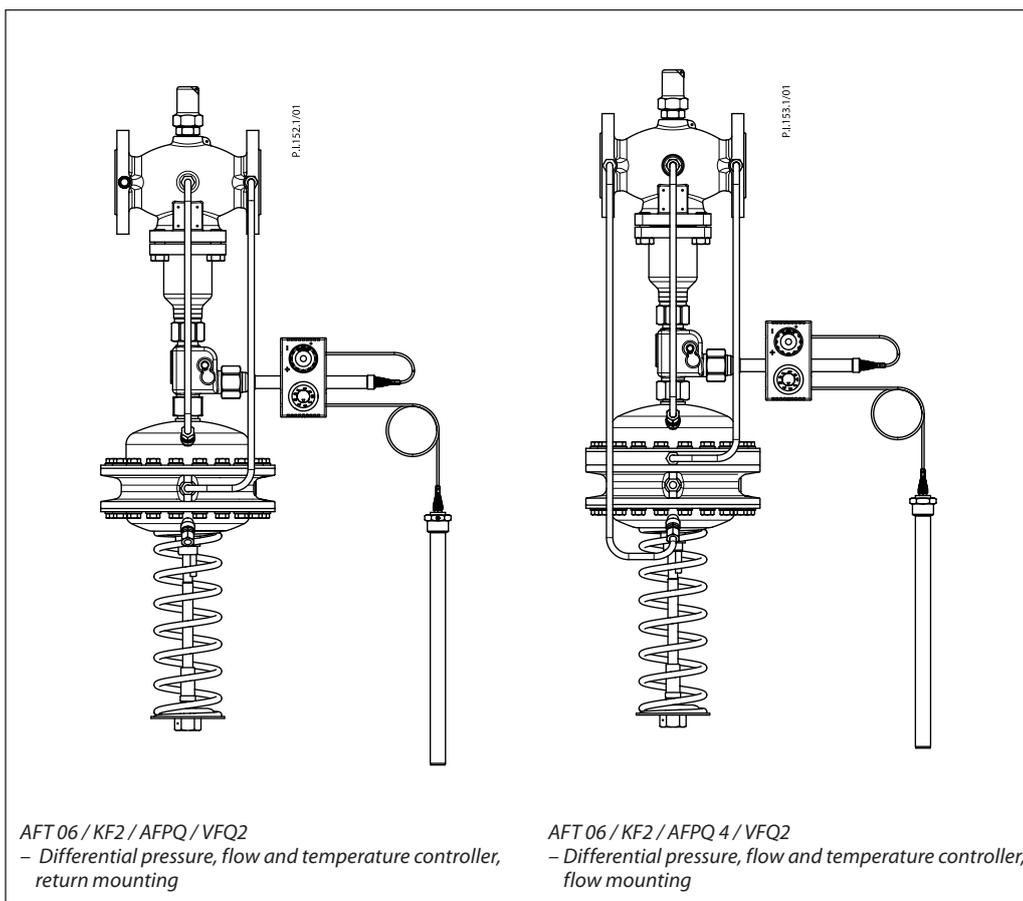

**Combinations**

Example:  
 Differential pressure, flow and temperature controller, return mounting; DN 15;  $k_{vs}$  4,0; PN 16; metallic sealing; setting range 0,1-0,7 bar; flow restrictor  $\Delta p_b$  0,2 bar;  $T_{max}$  150 °C; flange;

- 1x VFQ 2 DN 15 valve  
Code no: **065B2654**
- 1x AFPQ actuator  
Code no: **003G1029**
- 3x Impulse tube set AF  
Code no: **003G1391**
- 1x AFT06 thermostat  
Code no: **065-4390**
- 1x Combination piece KF2  
Code no: **003G1398**

Products will be delivered separately.

**Note:**  
 For AFT 06 thermostat data see relevant data sheet

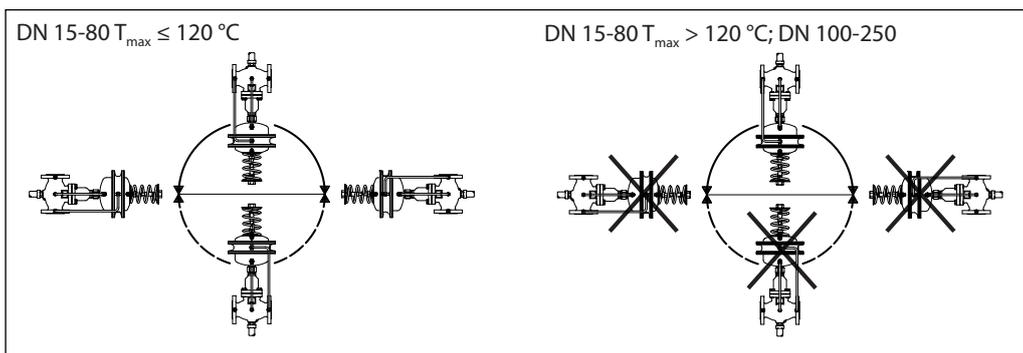

**Installation positions**

DN 15-80  $T_{max} \leq 120$  °C

The controllers can be installed in any position.

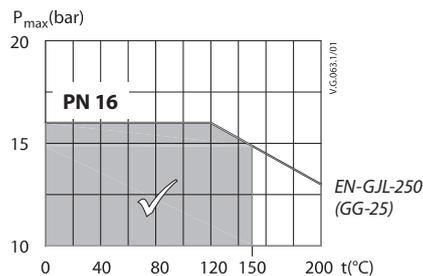

DN 15-80  $T_{max} > 120$  °C; DN 100-250

The controllers can be installed in horizontal pipes only, with a pressure actuator oriented downwards.

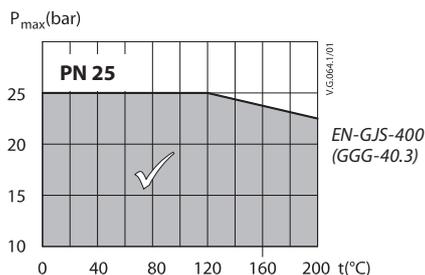

**Pressure temperature diagram**

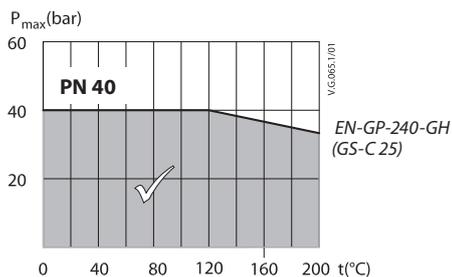

Working area is below P-T line and it ends at Tmax for each valve

Maximum allowed operating pressure as a function of media temperature (according to EN 1092-2)

Maximum allowed operating pressure as a function of media temperature (according to EN 1092-2)

Maximum allowed operating pressure as a function of media temperature (according to EN 1092-1)

**Sizing**

- Directly connected heating system

**Example 1**

Motorised control valve (MCV) for mixing circuit in direct-connected heating system requires differential pressure of 0,3 bar (30 kPa) and flow less than 1.900 l/h.

Possible pipe pressure losses in tubes, shut-off fittings, heatmeters, etc. are not included.

$k_v$  value is calculated according to formula:

$$k_v = \frac{Q_{max}}{\sqrt{\Delta p_{AFPQ} - \Delta p_b}} = \frac{1,9}{\sqrt{0,6 - 0,2}}$$

$$k_v = 3,0 \text{ m}^3/\text{h}$$

Given data:

- $Q_{max} = 1,9 \text{ m}^3/\text{h}$  (1.900 l/h)
- $\Delta p_{min} = 0,9 \text{ bar}$  (90 kPa)
- $\Delta p_{circuit}^1 = 0,1 \text{ bar}$  (10 kPa)
- $\Delta p_{MCV} = 0,3 \text{ bar}$  (30 kPa) selected
- $\Delta p_b^2 = 0,2 \text{ bar}$  (20 kPa)

Remark:

- <sup>1)</sup>  $\Delta p_{circuit}$  corresponds to the required pump pressure in the heating circuit and is not to be considered when sizing the AFPQ(4).
- <sup>2)</sup>  $\Delta p_b$  is differential pressure over flow restrictor.

Solution:

The example selects AFPQ 4 DN 15,  $k_{vS}$  value 4,0, with differential pressure setting range 0,1-0,7 bar, flow setting range 0,1-2,0  $\text{m}^3/\text{h}$ .

The differential pressure set value is:

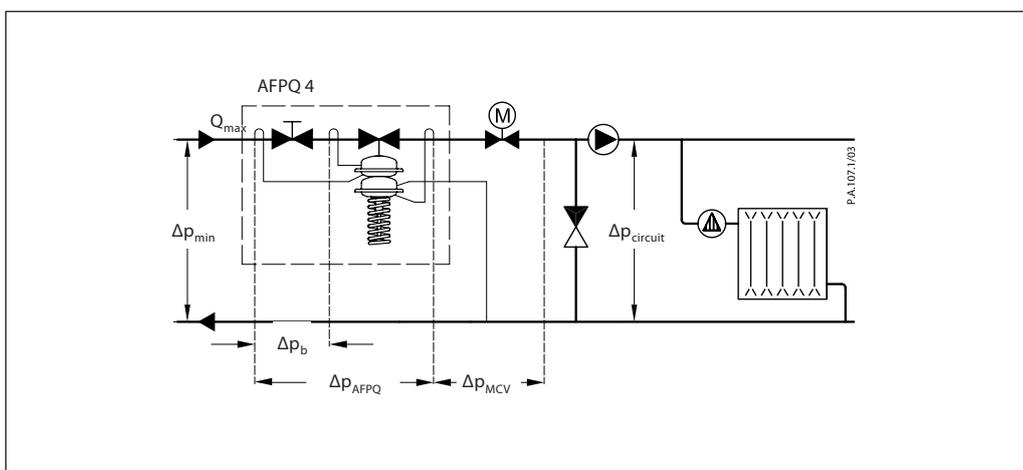

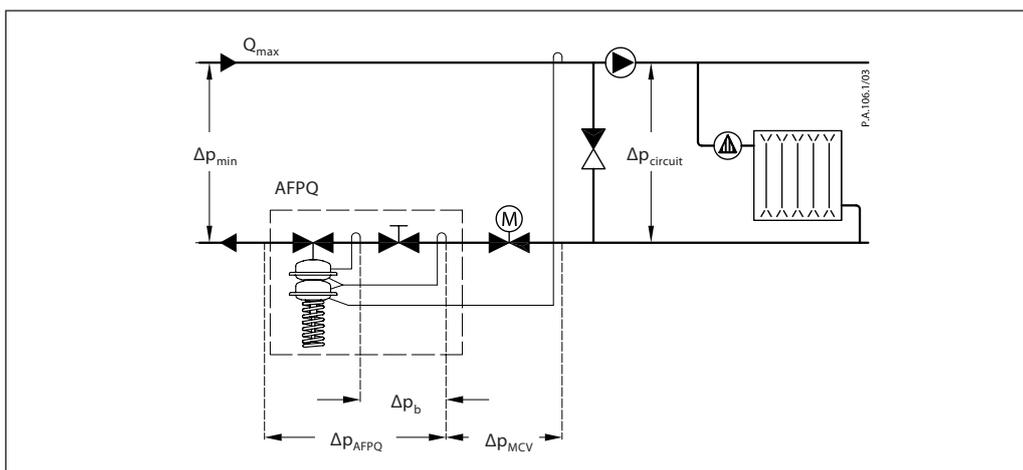

$$\Delta p_{set \text{ value}} = \Delta p_{MCV}$$

$$\Delta p_{set \text{ value}} = 0,3 \text{ bar} \text{ (30 kPa)}$$

The total pressure loss across the controller is:

$$\Delta p_{AFPQ} = \Delta p_{min} - \Delta p_{MCV} = 0,9 - 0,3$$

$$\Delta p_{AFPQ} = 0,6 \text{ bar} \text{ (60 kPa)}$$

**Sizing (continuous)**

– Indirectly connected heating system

**Example 2**

Motorised control valve (MCV) for indirectly connected heating system requires differential pressure of 0,3 (30 kPa) bar and flow less than 1.800 l/h.

*Given data:*

- $Q_{max} = 1,8 \text{ m}^3/\text{h}$  (1.800 l/h)
- $\Delta p_{min} = 1,0 \text{ bar}$  (100 kPa)
- $\Delta p_{exchanger} = 0,05 \text{ bar}$  (5 kPa)
- $\Delta p_{MCV} = 0,3 \text{ bar}$  (30 kPa) selected
- $\Delta p_b^{1)} = 0,2 \text{ bar}$  (20 kPa)

*Remark:*

<sup>1)</sup>  $\Delta p_b$  is differential pressure over flow restrictor

The differential pressure set value is:

- $\Delta p_{set \text{ value}} = \Delta p_{exchanger} + \Delta p_{MCV}$
- $\Delta p_{set \text{ value}} = 0,05 + 0,3$
- $\Delta p_{set \text{ value}} = 0,35 \text{ bar}$  (35 kPa)

The total pressure loss across the controller is:

$$\Delta p_{AFPQ} = \Delta p_{min} - \Delta p_{exchanger} - \Delta p_{MCV}$$

$$\Delta p_{AFPQ} = 1,0 - 0,05 - 0,3$$

$$\Delta p_{AFPQ} = 0,65 \text{ bar} \text{ (65 kPa)}$$

Possible pipe pressure losses in tubes, shut-off fittings, heatmeters, etc. are not included.

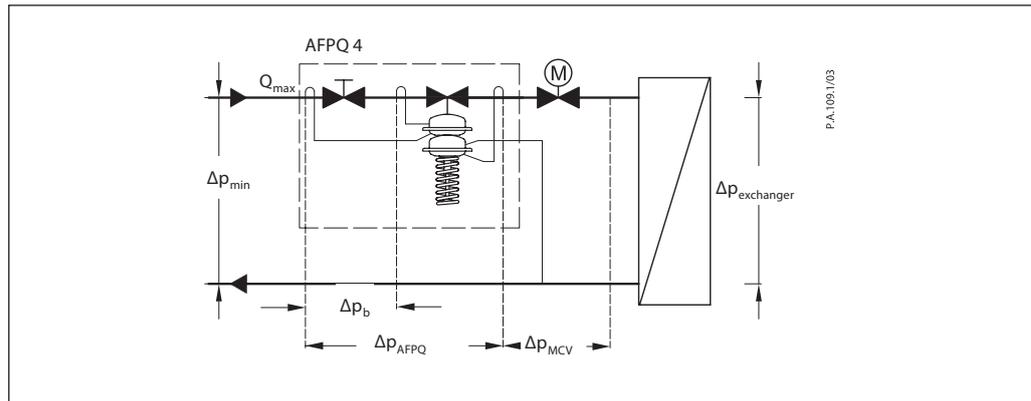

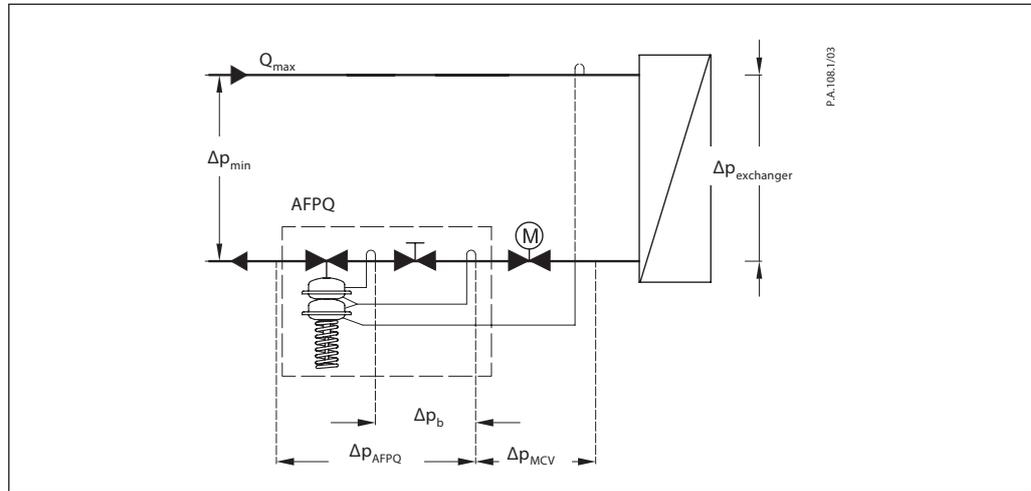

$k_v$  value is calculated according to formula:

$$k_v = \frac{Q_{max}}{\sqrt{\Delta p_{AFPQ} - \Delta p_b}} = \frac{1,8}{\sqrt{0,65 - 0,2}}$$

$$k_v = 2,7 \text{ m}^3/\text{h}$$

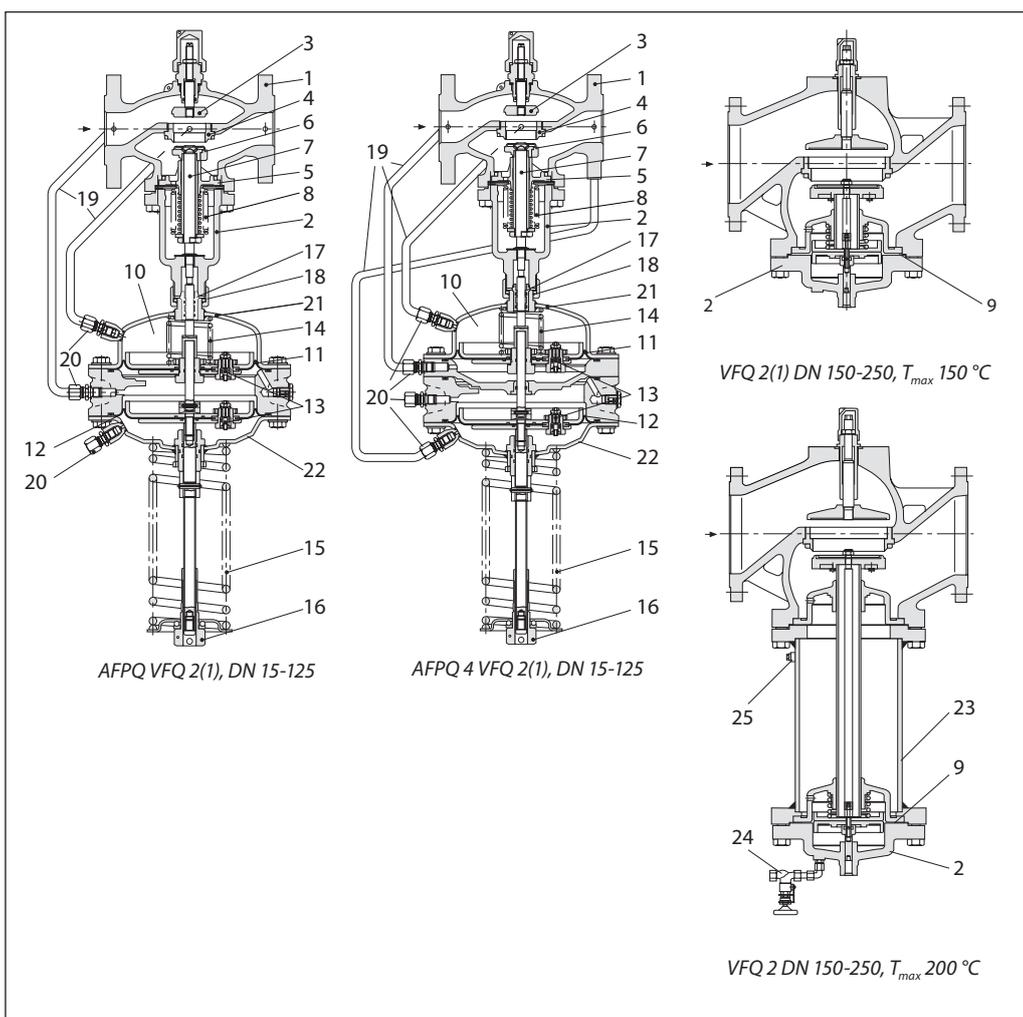

*Solution:*

The example selects AFPQ 4 DN 15,  $k_{vS}$  value 4,0, with differential pressure setting range 0,1-0,7 bar, flow setting range 0,1-2,0  $\text{m}^3/\text{h}$ .

**Design**

1. Valve body
2. Cover
3. Adjustable flow restrictor
4. Valve seat
5. Valve insert
6. Pressure relieved valve cone
7. Valve stem
8. Bellows for pressure relief of valve cone
9. Diaphragm for pressure relief of valve cone
10. Actuator
11. Control diaphragm for flow control
12. Control diaphragm for diff. pressure control
13. Excess pressure safety valve
14. Built-in spring for flow control
15. Setting spring for diff. pressure control
16. Adjuster for diff. pressure setting, prepared for sealing
17. Stuffing cone
18. Union nut
19. Impulse tube
20. Compression fitting for impulse tube
21. Upper casing of diaphragm
22. Lower casing of diaphragm
23. Valve body extension
24. Shut off valve for water filling
25. Closing plug

**Function**

Flow volume causes pressure drop across the adjustable flow restrictor. Resulting pressures are being transferred through the impulse tubes to the actuator chambers and act on control diaphragm for flow control. The flow restrictor diff. pressure is controlled and limited by means of built-in spring for flow control. Control valve closes on rising differential pressure and opens on falling differential pressure to control max flow.

Pressure changes from flow and return pipes are being transferred through the impulse tubes to the actuator chambers and act on control diaphragm for diff. pressure control. The diff. pressure is controlled by means of setting spring for diff. pressure control. Control valve closes on rising differential pressure and opens on falling differential pressure to maintain constant differential pressure.

Controller is equipped with two excess pressure safety valves, which protect control diaphragms for flow and diff. pressure control from too high differential pressure.

**Setting**

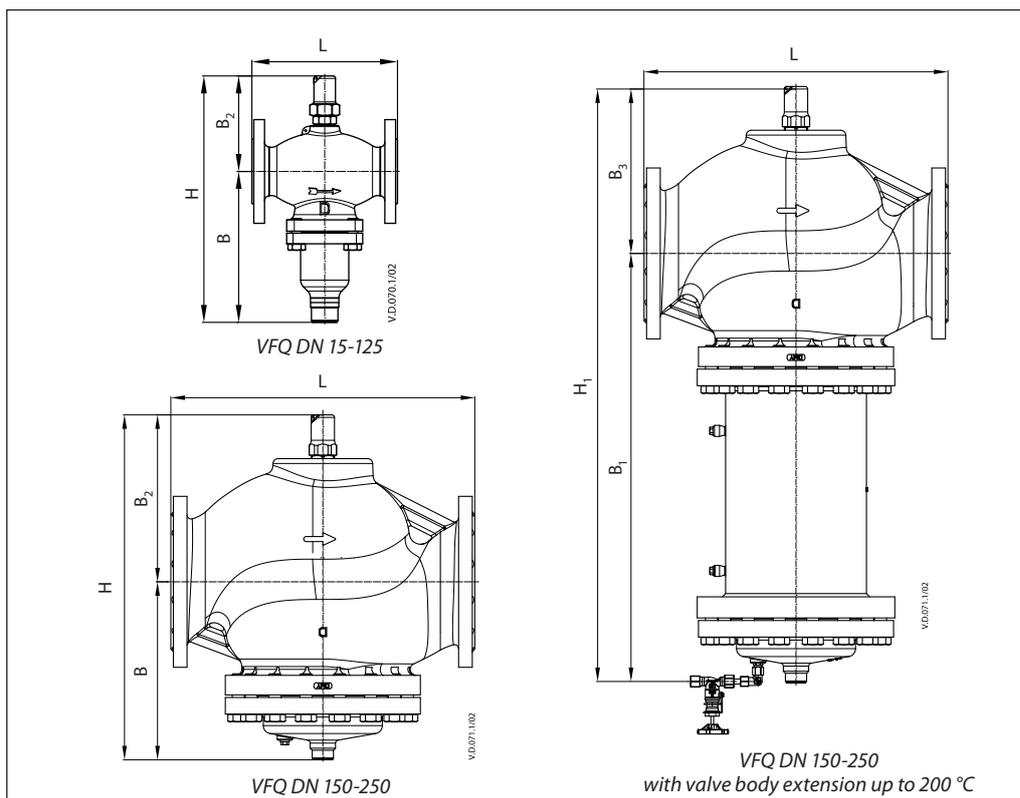

*Flow setting*

Flow setting is being done by the adjustment of the flow restrictor position. The adjustment can be performed on the basis of flow adjustment diagram (see relevant instructions) and/or by the means of heat meter.

*Differential pressure setting*

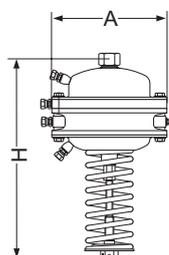

Differential pressure setting is being done by the adjustment of the setting spring for diff. pressure control. The adjustment can be done by means of adjuster for diff. pressure setting and pressure indicators.
